

We will upgrade your single-instance Breakaway Live to BreakawayOne 1x HD for free. You may add the optional built-in Streaming Encoder, for the HD processing core, for US\$79. Here is the link: [https://store.claessedwards.com/product\\_p/b1se.htm](https://store.claessedwards.com/product_p/b1se.htm)

Please be sure that you are running the current version of BreakawayOne.

Here is the link to the installer: <http://www.breakawayone.com/downloads>

Install it on the system where you want to register BreakawayOne. Then configure it to suit your requirements.

Launch the BreakawayOne Config application. Click on the [Main Configuration] button and then the [Processing Cores] button and adjust the sliders to enable the audio processing cores that you require. Then click on the Apply button.

Next, launch the BreakawayOne App and complete the setup. Here is some setup information:

How to configure an audio processing core [http://www.claessedwards.com/download/Basic\\_Config.pdf](http://www.claessedwards.com/download/Basic_Config.pdf)

Here is a YouTube video which shows how to enable and configure a HD core: <https://youtu.be/EGluRJi0H0>

How to configure the Streaming Encoder [http://www.claessedwards.com/download/Streaming\\_Encoder\\_Setup.pdf](http://www.claessedwards.com/download/Streaming_Encoder_Setup.pdf)

Here is a YouTube video which shows how to configure the Streaming Encoder: <https://youtu.be/EGTJGgPgF4k>

During the trial period, all of the BreakawayOne features are fully enabled so that you can complete your evaluation before requesting a license key.

Once you have confirmed that BreakawayOne is performing as required, launch the BreakawayOne App and select Common - System - License Information, then press "Get License Summary": <https://youtu.be/jdLcBJO3hfw>

Copy & paste the configuration information into an email and send it to [broadcast@claessedwards.com](mailto:broadcast@claessedwards.com)

You can add additional AM, FM or HD processing cores, Management package, Streaming encoder for HD cores, Livewire, RDS for FM cores, and Separate Low Latency options.
